

Claims:

1-27. (cancelled).

28. (previously presented): A stabilizer mixture comprising a component a) and a component e) in a weight ratio of 1:1 wherein

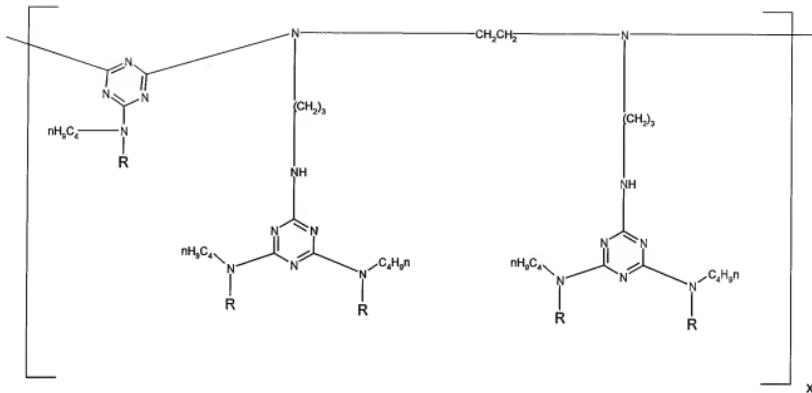

component a) is a product of the formula

11-14

and

component e) is a product having the structural formula

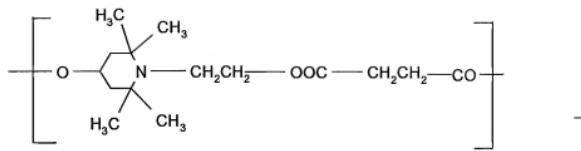

wherein R is

and wherein x is a number such that the highest number average molecular weight (osmotic method) is 3200 and the lowest number average molecular weight (osmotic method) is 2900.

29-30. (cancelled).

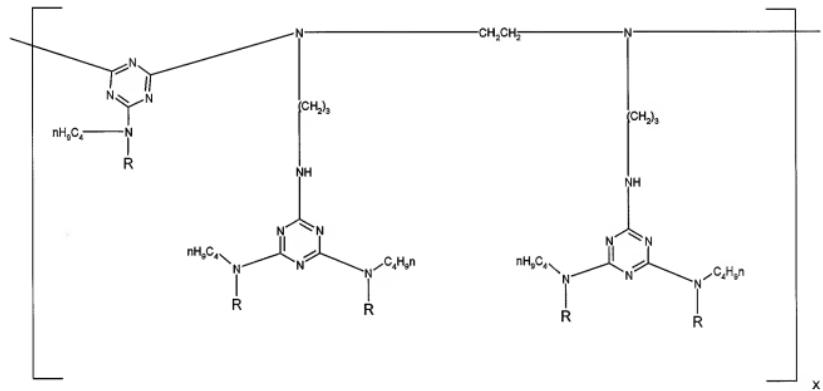

31. (currently amended): A stabilizer mixture comprising a component a) and a component e) according to claim 30, wherein component a) is a product of the formula

11-14

and

component e) is a product having the structural formula

wherein R is

and wherein x is a number such that the highest number average molecular weight (osmotic method) is 3200 and the lowest number average molecular weight (osmotic method) is 2900

, wherein and the weight ratio between component a) and component e) is 5:1 to 1:5.

32-33. (cancelled).

34. (currently amended): A composition comprising an organic material which is sensitive to oxidative, thermal or light-induced degradation and a stabilizer mixture according to claim 30_31.

35. (previously presented): A composition according to claim 34, in which the organic material is a polyolefin.

36. (previously presented): A composition according to claim 34, in which the organic material is polyethylene, polypropylene or a copolymer of polyethylene or polypropylene.

37. (currently amended): A process for stabilizing an organic material which is sensitive to oxidative, thermal or light-induced degradation, which comprises incorporating a stabilizer mixture according to claim 30_31 into the organic material.

38. (currently amended): A composition comprising an organic material which is sensitive to oxidative, thermal or light-induced degradation and a stabilizer mixture according to claim-33_31.

39. (previously presented): A composition according to claim 38, in which the organic material is a polyolefin.

40. (previously presented): A composition according to claim 38, in which the organic material is polyethylene, polypropylene or a copolymer of polyethylene or polypropylene.

41. (currently amended): A process for stabilizing an organic material which is sensitive to oxidative, thermal or light-induced degradation, which comprises incorporating a stabilizer mixture according to claim 33_31 into the organic material.
